

Her age

43

What bothered her

BROWN SPOTS, LINES
AND WRINKLES AND A
WEATHERED APPEARANCE

What she did

INJECTIONS OF BOTOX
AND JUVÉDERM AND BBL

A few weeks later, Juvéderm was injected into her cheeks, forehead, marionette lines and nasolabial folds. To further enhance those results, another round of Juvéderm was used a few weeks later. Once her lines had faded and volume was restored to deficient areas, Dr. Siperstein treated her skin with one session of BBL (BroadBand Light) to brighten her skin tone and correct discoloration. The result: smoother, more evenly toned skin that makes her look about 10 years younger.

This 43-year-old woman met with Boca Raton, FL, dermatologist Robyn Siperstein, MD, about the brown spots and wrinkles on her skin, and along with the help of her doctor, created a customized plan that would be spread out over the course of two months to combat the problems at hand. Dr. Siperstein first injected Elise's forehead and crow's-feet with Botox to smooth out visible lines.

BEFORE: Sun-damaged skin, lines and wrinkles
